The Experts on Cleaning and Maintenance

MUCH MORE THAN JUST A NICE BODY

The KOBRA is a new walk-behind sweeper ideal for the fast, efficient sweeping of small and medium size areas. It is available either driven by a petrol engine (Briggs & Stratton or Honda) or battery powered. The electric version, which is extremely quiet and pollution free, is particularly suitable for indoor applications. The KOBRA has a main brush of 550 mm, a total sweeping path of 780 mm, and boasts a working capacity close to 3.510 sqm/h.

The Kobra's main brush, made-up with mixed PPL, allows for thorough cleaning of even the dustiest and most uneven floors. Coupled with a capacious rear dust collector and an ultra efficient polyester bag filter the Kobra delivers clean floors, effectively dust free (99,9%) with maximum filter life and minimal maintenance.

The Kobra: packed with features with productivity to match. The only thing you won't believe is how much machine you get for so little money.

Traction can be activated by mean of a comfortable lever positioned on the operator's handle.

The adjustable handle allows for improved working comfort and greater maneuverability, as it is can be adapted to the height of the operator.

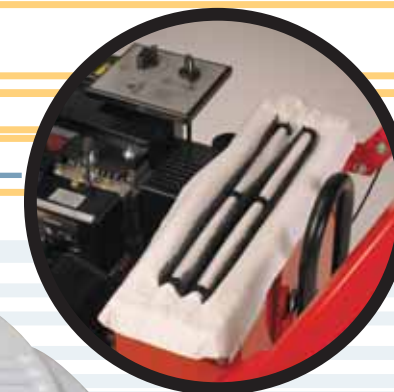

The large capacity rear container means minimum time loss for emptying. It is mounted on wheels, and it's equipped with a comfortable handle to allow for easier emptying.

The dashboard, located on the hood, is very simple to use and includes: vacuum cut-off device, side brush raising/lowering device, key switch.

The machine is equipped with a front flap lift device to allow for easier pick up of bulky debris.

Fine dust is filtered through a polyester bag filter, which allows for an excellent filtering rate (99,9%) and has a much longer lasting life than traditional filters. The filter can be cleaned thanks to an efficient mechanical shaker.

The body of the machine is made-up with a special anti-shock material to protect the KOBRA from unwanted damage.
